EUMETSAT Data Access Client (EUMDAC)

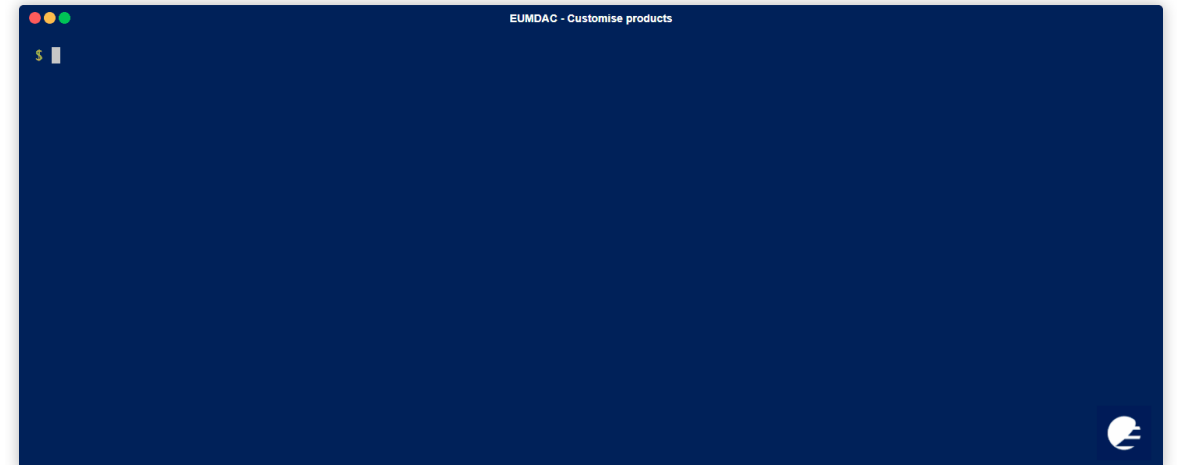

EUMDAC is the EUMETSAT Data Access Client. It provides simple access to the EUMETSAT data from a variety of satellite missions. As a Python library, it comes with many methods and helpers to use EUMETSATs APIs and services, like Data Store and Data Tailor. It also provides a variety of useful command-line utilities for data search, download and processing.

EUMETSAT Data Access Client (EUMDAC)

www.eumetsat.int

STEP 1: Open the guide on a new window

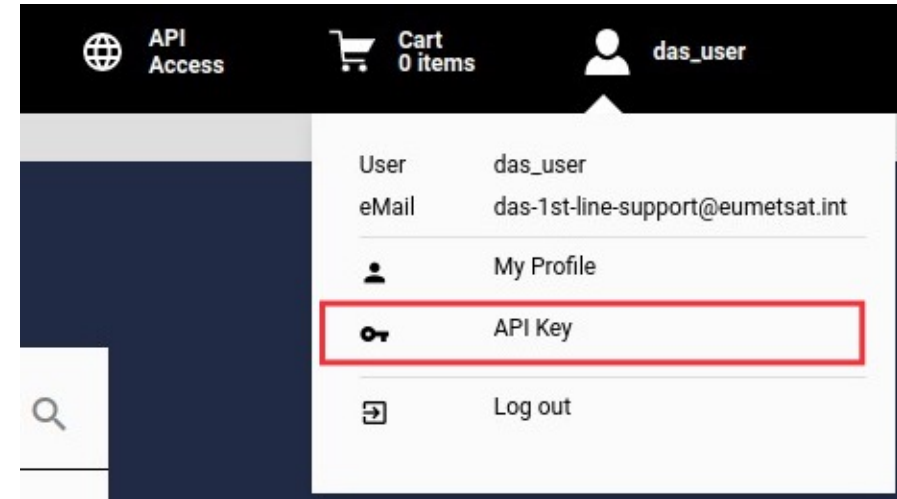

Use this link!

<https://user.eumetsat.int/resources/user-guides/introductory-data-store-user-guide>

EUMETSAT Data Access Client (EUMDAC)

STEP 2: Get your Consumer key and Secret key

Use this link!

<https://data.eumetsat.int>

or

<https://api.eumetsat.int/api-key/>

Api Key Management

User credentials

Consumer key

Consumer secret

It is possible to generate an API access token by calling the token API service using the credentials provided above. Below the cURL command:

```
curl -k -d "grant_type=client_credentials" \
-H "Authorization: Basic Base64(consumer-key:consumer-secret)" \
https://api.eumetsat.int/token
```

API Token

The following token can be used to access the APIs. It has a validity of one hour

API token

It should be added in the http header of each API call as shown in the following sample cURL command:

```
curl -k \
-H "Authorization: Bearer <api-token>" \
<api-endpoint>
```

Refresh token ↻

Show hidden fields 🔍

STEP 3: Open your terminal and add your credentials as shown

```
eumdac --set-credentials <ConsumerKey>  
<ConsumerSecret>
```

1. In Windows Search, search for anaconda prompt and select Windows Terminal from the search results.

2. In Mac OS press Command + space and search for terminal

3. On Linux, search for Terminal.

STEP 4: Use EUMDAC to describe the collections to find your collection ID

Remember, save your IDs on a notepad, so you don't risk to lose them!

This is how a collection ID looks like

Collection: **EO:EUM:DAT:METOP:OSI-104**

STEP 5: Within the collection search for your product by adding starting time, ending time and area of interest

This is how a command will look like:

```
Command: eumdac search -c EO:EUM:DAT:METOP:OSI-104 -s 2012-12-21 -e 2012-12-22 --bbox 51.28 51.69 0.51 0.33
```

NOTE: this will give you a list of products that match your search. Choose the product you want and, if you are worried to lose it, save it on a notepad

STEP 6: You are now ready to start your download!

All you need to do is using this command:

```
eumdac download -c <your collection ID> -p <Your product ID>
```

STEP 7: Now we are going to use the Data Tailor

Let's first think about a chain of customisation we want to do. The below command will tailor and download the specified product. For example, I want Geotiff format and reprojection:

```
eumdac download -c EO:EUM:DAT:MSG:HRSEVIRI -p MSG4-SEVI-MSG15-0100-NA-20220304101243.253000000Z-NA --tailor "product: HRSEVIRI, format: geotiff, projection: geographic"
```

You are all set!

Well Done!!
