# Outline

1. The VISIR + project
2. The VISIR system
  - 1.1 Web access
  - 1.2 Experiments preparation
  - 1.3 Hardware, connections and *MaxLists*
  - 1.4 Users and circuits
3. Demo
4. Hands-on training

# The VISIR + project

Brief introduction

The VISIR + project targets the area of Electrical & Electronics Engineering, and, within it, the subject of circuit theory & practice.

The nature of each experiment (hands-on, virtual, real-remote) has an impact on the students' perception of circuits' behaviour, being therefore mandatory to understand how these different learning objects can be arranged together in order to scaffold their understanding and increase their laboratory-based skills.

The VISIR + project aims to define, develop and evaluate a set of educational modules comprising hands-on, virtual, and remote experiments, the later supported by a **remote lab named VISIR**.

**The VISIR remote lab is the focus of this presentation !**

# Introduction to VISIR system

# Introduction to VISIR (web access)

A screenshot of a web browser showing the homepage of the OpenLabs Electronics Laboratory. The title bar reads "OpenLabs Electronics Labora...". The address bar shows "physiclabfarm.iseplab.ipp.pt/index.php". The page features a large banner with the text "OpenLabs Electronics Laboratory". Below the banner is a "MAIN MENU" with links to Start, About, Demo, and FAQ. A "Welcome" section with a subtext about the distance electronics laboratory is present. The footer contains the ISEP logo and links to various social media and institutional pages.

The screenshot shows the homepage of the OpenLabs Electronics Laboratory. The title "OpenLabs Electronics Laboratory" is at the top, along with a "Login" button and language selection. Below the title is a section titled "Frequently asked questions". A large image of a computer monitor displaying a breadboard setup is centered. To the left is a sidebar with "HARD MENU" and links to "About", "FAQ", and "Contact". The footer contains copyright information and a "Main access" banner.

The screenshot shows the Electronics Workbench software interface. At the top, there are three main components displayed: a breadboard simulation, a multimeter (Fuke 23), and a function generator. Below these, five smaller icons represent the breadboard, multimeter, function generator, oscilloscope, and dc power source. The central part of the screen features a large, stylized title "Experiments (access, preparation)" in blue and yellow. Below the title is a detailed schematic diagram of a circuit setup on a breadboard. The circuit includes a DC Power Supply (25V, COM, -25V, +6V, GND), a Function Generator (GND), and a 1uF capacitor connected to ground. Wires are color-coded according to a legend on the right. The legend also lists other components: Ch1 and Ch2 for Oscilloscope, DMM, and various ranges for VOhm, mA, and GND. At the bottom of the interface, there are buttons for Save, Load, Breadboard, Function Generator, Oscilloscope, Perform Experiment, and Help.

# Introduction (Hardware, connections and *MaxLists*)

These rules must be defined according to the available hardware connections defined in the *ComponentList* file

The image consists of two parts, a) and b). Part a) shows a stack of three green printed circuit boards (PCBs) representing switching matrixes. Labels point to various components: 'Oscilloscope channel 2 input' and 'Oscilloscope channel 1 input' on the top board; 'DMM input HI' and 'DC power supply inputs' on the middle board; 'DMM input LO' and 'FGENA input' on the bottom board; and a 'USB connector' on the right side of the bottom board. A callout box at the top right of the top board states 'up to 18 component matrixes'. Part b) shows a close-up of a single PCB with several integrated circuits and connecting wires. A callout box points to one of the ICs with the text 'Electronic circuit connected to one Component matrix'. Below part b) is a sample of a 'MaxList' file, which is incomplete, containing the following text:

```
 (...) VFGENA_FGENA1 A 0 max:5  
SHORTCUT_1 0 A  
*5VA_1 A 0  
SHORTCUT_2 A B  
R_1 A B 10k  
C_3 A B 56n  
(...)
```

A callout box next to the MaxList text says 'MaxList sample {incomplete}'.

a) Example of switching matrixes

b) Components connected to a matrix and a *MaxList* file sample

# Demo

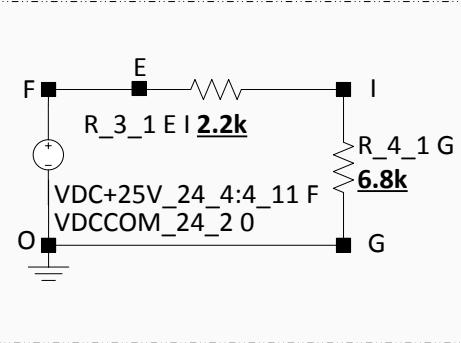

Web access: [www.physicsslabfram.isep.ipp.pt](http://www.physicsslabfram.isep.ipp.pt) (Course: TA\_VISIR; Name: TA\_demo1)

## Serial resistor circuit

## MaxList

**VDC+25V\_24\_4:4\_11 F**  
**VDCCOM\_24\_2 0**  
  
**R\_3\_1 E I 2.2k**  
**R\_4\_1 G I 6.8k**  
  
**SHORTCUT\_3\_14 E F**  
**SHORTCUT\_2\_6 G O**

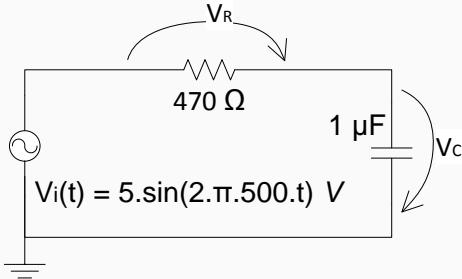

MaxList defined according to the following nodes using the available components connections specified in the *componentList* file.

1. Observe the value of each resistor using the interface and confirm it with the DMM;
2. Selecting the +25 V DC power, setup the circuit in the virtual breadboard and connect the outputs +25V and COM to the circuit (connect the COM to the GND).
3. Connect the DMM and measure the voltage in each resistor;
4. Connect the DMM to measure the current in the circuit; a) Place the DMM between the voltage source and the resistor; b) Place the DMM between both resistors and observe that there is an error (verify the rules defined in the *MaxList* file that is also available in Annex C);
5. Swap the resistors and observe that there is an error (rules defined in the *MaxList* file also available in Annex C).

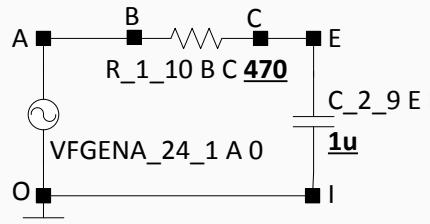

Web access: [www.physicsslabfram.isep.ipp.pt](http://www.physicsslabfram.isep.ipp.pt) (Course: TA\_VISIR; Name: TA\_demo2)

## Serial RC circuit

## MaxList

```
VFGENA_24_1 A 0
R_1_10 B C 470
C_2_9 E I 1u
SHORTCUT_3_13 C E
SHORTCUT_1_14 A B
SHORTCUT_3_6 O I
```

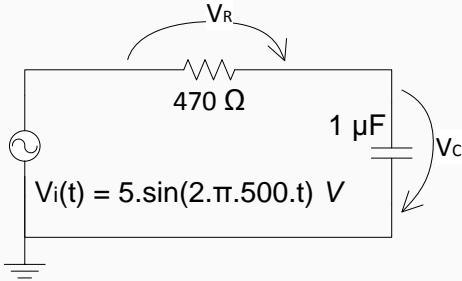

MaxList defined according to the following nodes using the available components connections specified in the *componentList* file.

1. Observe the value of each component using the interface and confirm the value of the resistor with the DMM;
2. Setup the circuit in the virtual breadboard and adjust the voltage and the frequency levels of the Function Generator as indicated;
3. Confirm the adjusted voltage and frequency levels using the Oscilloscope.
4. Connect the terminals of the Oscilloscope to observe simultaneously the signal generated by the function generator,  $vi(t)$ , and the signal in the capacitor,  $vc(t)$  (test the different buttons available in the oscilloscope);
5. Adjust the Oscilloscope as you traditionally do in a hands-on laboratory to calculate the gap between both signals;

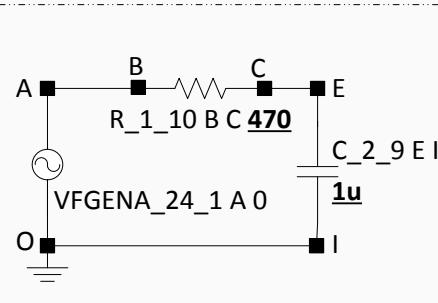

Web access: [www.physicsslabfram.isep.ipp.pt](http://www.physicsslabfram.isep.ipp.pt) (Course: TA\_VISIR; Name: TA\_demo2)

## Serial RC circuit

## MaxList

```
VFGENA_24_1 A 0
R_1_10 B C 470
C_2_9 E I 1u
SHORTCUT_3_13 C E
SHORTCUT_1_14 A B
SHORTCUT_3_6 O I
```

MaxList defined according to the following nodes using the available components connections specified in the *componentList* file.

6. Do not connect the instruments' grounds and observe if there is any error;
7. Verify the restrictions imposed by the VISIR to observe simultaneously the signals in the resistor,  $vr(t)$ , and in the capacitor  $vc(t)$ ;
8. Swap the positions of R and C components and observe the generated error (verify the rules in the *MaxList* file that is also available in Annex C);
9. Using the DMM, measure the voltages and the currents in the circuit.

# Using VISIR: Hands-on

You are invited to use the VISIR system available at ISEP

Web: <https://physicslabfarm.isep.ipp.pt/index.php?sel=guestlogin>

Web access: [www.physicsslabfram.isep.ipp.pt](http://www.physicsslabfram.isep.ipp.pt) (Course: TA\_VISIR; Name: TA\_circuit1)

Available resistors			
R1 [Ω]	1.0k	470	22k
R2 [Ω]	2.2k	open	
R3 [Ω]	82k	open	

1. Setup one circuit in the breadboard according to the available resistors in the table;
2. Selecting the DC power, connect the outputs +6V and GND to the circuit;
3. Adjust the voltage source to  $E=6$  V and confirm the value using the DMM;
4. Using the DMM measure the currents in the different branches of the circuit (note: if you try to measure the currents between the indicated points a-b, c-d, e-f or g-h an error will be generated - see the MaxList file in the Annex C -);
5. Using the DMM measure the voltage in each component;
6. Repeat this analysis to the other circuits able to setup according to the possibilities indicated in the table.

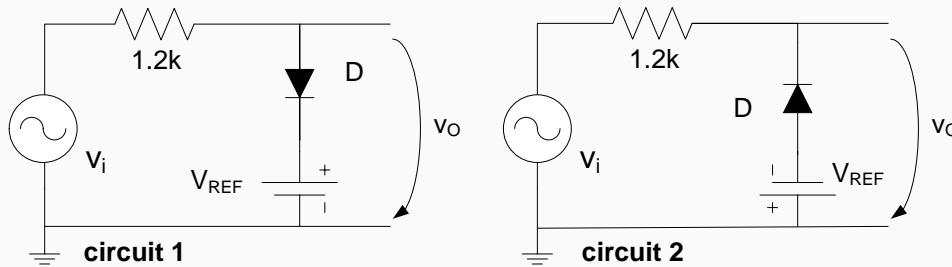

Web access: [www.physicsslabfram.isep.ipp.pt](http://www.physicsslabfram.isep.ipp.pt) (Course: TA\_VISIR; Name: TA\_circuit2)

1. Setup circuit 1 and adjust  $Vi(t)$  to the indicated values;
2. Using both channels of the oscilloscope confirm and visualize  $Vi(t)$  and  $Vc(t)$ ;
3. Using the DMM measure the RMS current in the different branches;
4. Using the DMM measure the RMS voltage in each component;
5. Setup circuit 2 and adjust the  $Vi(t)$  to the indicated values;
6. Using both channels of the oscilloscope confirm and visualize  $Vi(t)$  and  $VL(t)$ ;
7. Using the DMM measure the RMS current in the different branches;
8. Using the DMM measure the RMS voltage in each component.

# Circuit 3: Limiting circuits with diodes

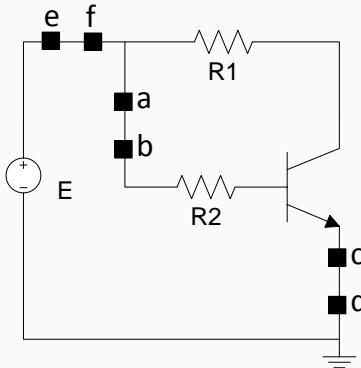

Web access: [www.physicsslabfram.isep.ipp.pt](http://www.physicsslabfram.isep.ipp.pt) (Course: TA\_VISIR; Name: TA\_circuit3)

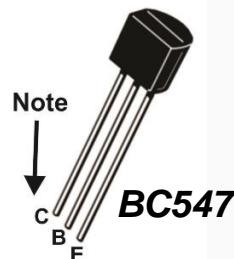

1. Setup circuit 1 and adjust the Function Generator to  $V_i=5.\sin(2.\pi.5000.t)$  V and confirm that value using the Oscilloscope;
2. Selecting the DC power, connect the outputs +25V and COM to the circuit (connect the COM to the GND), and adjust  $V_{REF}=2$  V. Confirm that value using the DMM;
3. Visualize  $V_i$  and  $V_o$  simultaneously using the Oscilloscope;
4. Change  $V_{REF}$  and verify that the commutation point of the diode changes;
5. Setup circuit 2 and repeat steps 2, 3 and 4.

# Circuit 4: Circuit with BJT – DC operating point

Web access: [www.physicsslabfram.isep.ipp.pt](http://www.physicsslabfram.isep.ipp.pt) (Course: TA\_VISIR; Name: TA\_circuit4)

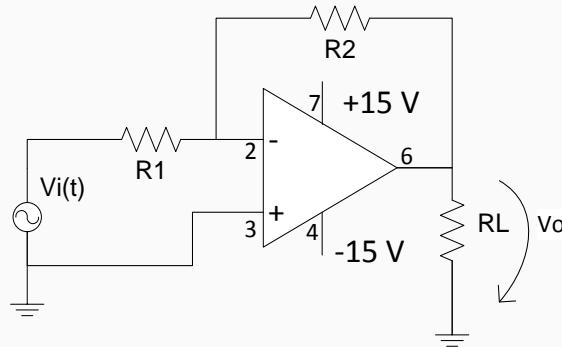

1. Setup the circuit, connect the DC power outputs +6V and COM (connect the COM to the GND), and adjust to  $E=6$  V. Confirm that value using the DMM;
2. Using the DMM, fill-in the following table and evaluate the current state of the BJT (active, saturation or cut-off); (note: you can only measure currents between points a-b, c-d and e-f. Observe the MaxList file in Annex C.)

R1	R2	E	IC	IE	IB	VCE	VBE	VBC	state
6k8	22k	6 V							

# Circuit 5: Amp-op Inverter Circuit

Web access: [www.physicsslabfram.isep.ipp.pt](http://www.physicsslabfram.isep.ipp.pt) (Course: TA\_VISIR; Name: TA\_circuit5)

$$R1 = 100 \text{ k}$$

$$R2 = 100 \text{ k or } 220 \text{ k}$$

$$RL = 2.2 \text{ k}$$

$$E = 6 \cdot \sin(2\pi \cdot 5000 \cdot t) \text{ V}$$

1. Setup the circuit in the virtual breadboard changing R2 according to the values indicated in the table.
2. Using the Function Generator adjust the Vi voltage according to the indicated in the figure and, using the Oscilloscope, verify the amplitude and the frequency;
3. Using the Oscilloscope observe Vi and Vo of the circuit;
4. Using the DMM measure the RMS:
  - voltage in the different components;
  - current in the load.

# Thank you for your attention!
