Table 1. Distributions during the calibration period (2004–2016) of fire events among classes of fire danger for three ranges of daily energy released by fires when classes are obtained from the daily model, the LSA SAF product and the EFFIS module. Each cell contains the number of observed events and [in brackets] the corresponding fraction (%) of the total number of events belonging to the same energy layer.

	Energy [GJ]	Low	Moderate	High	Very high	Extreme	Total
