EUMETSAT is an intergovernmental Organization

Tasks

- Develop, maintain, exploit European systems of meteorological satellites, taking into account as far as possible the recommendations
- Contribute to operational climate monitoring and the detection of global climatic changes.

Climate Monitoring - "Satellite Period"

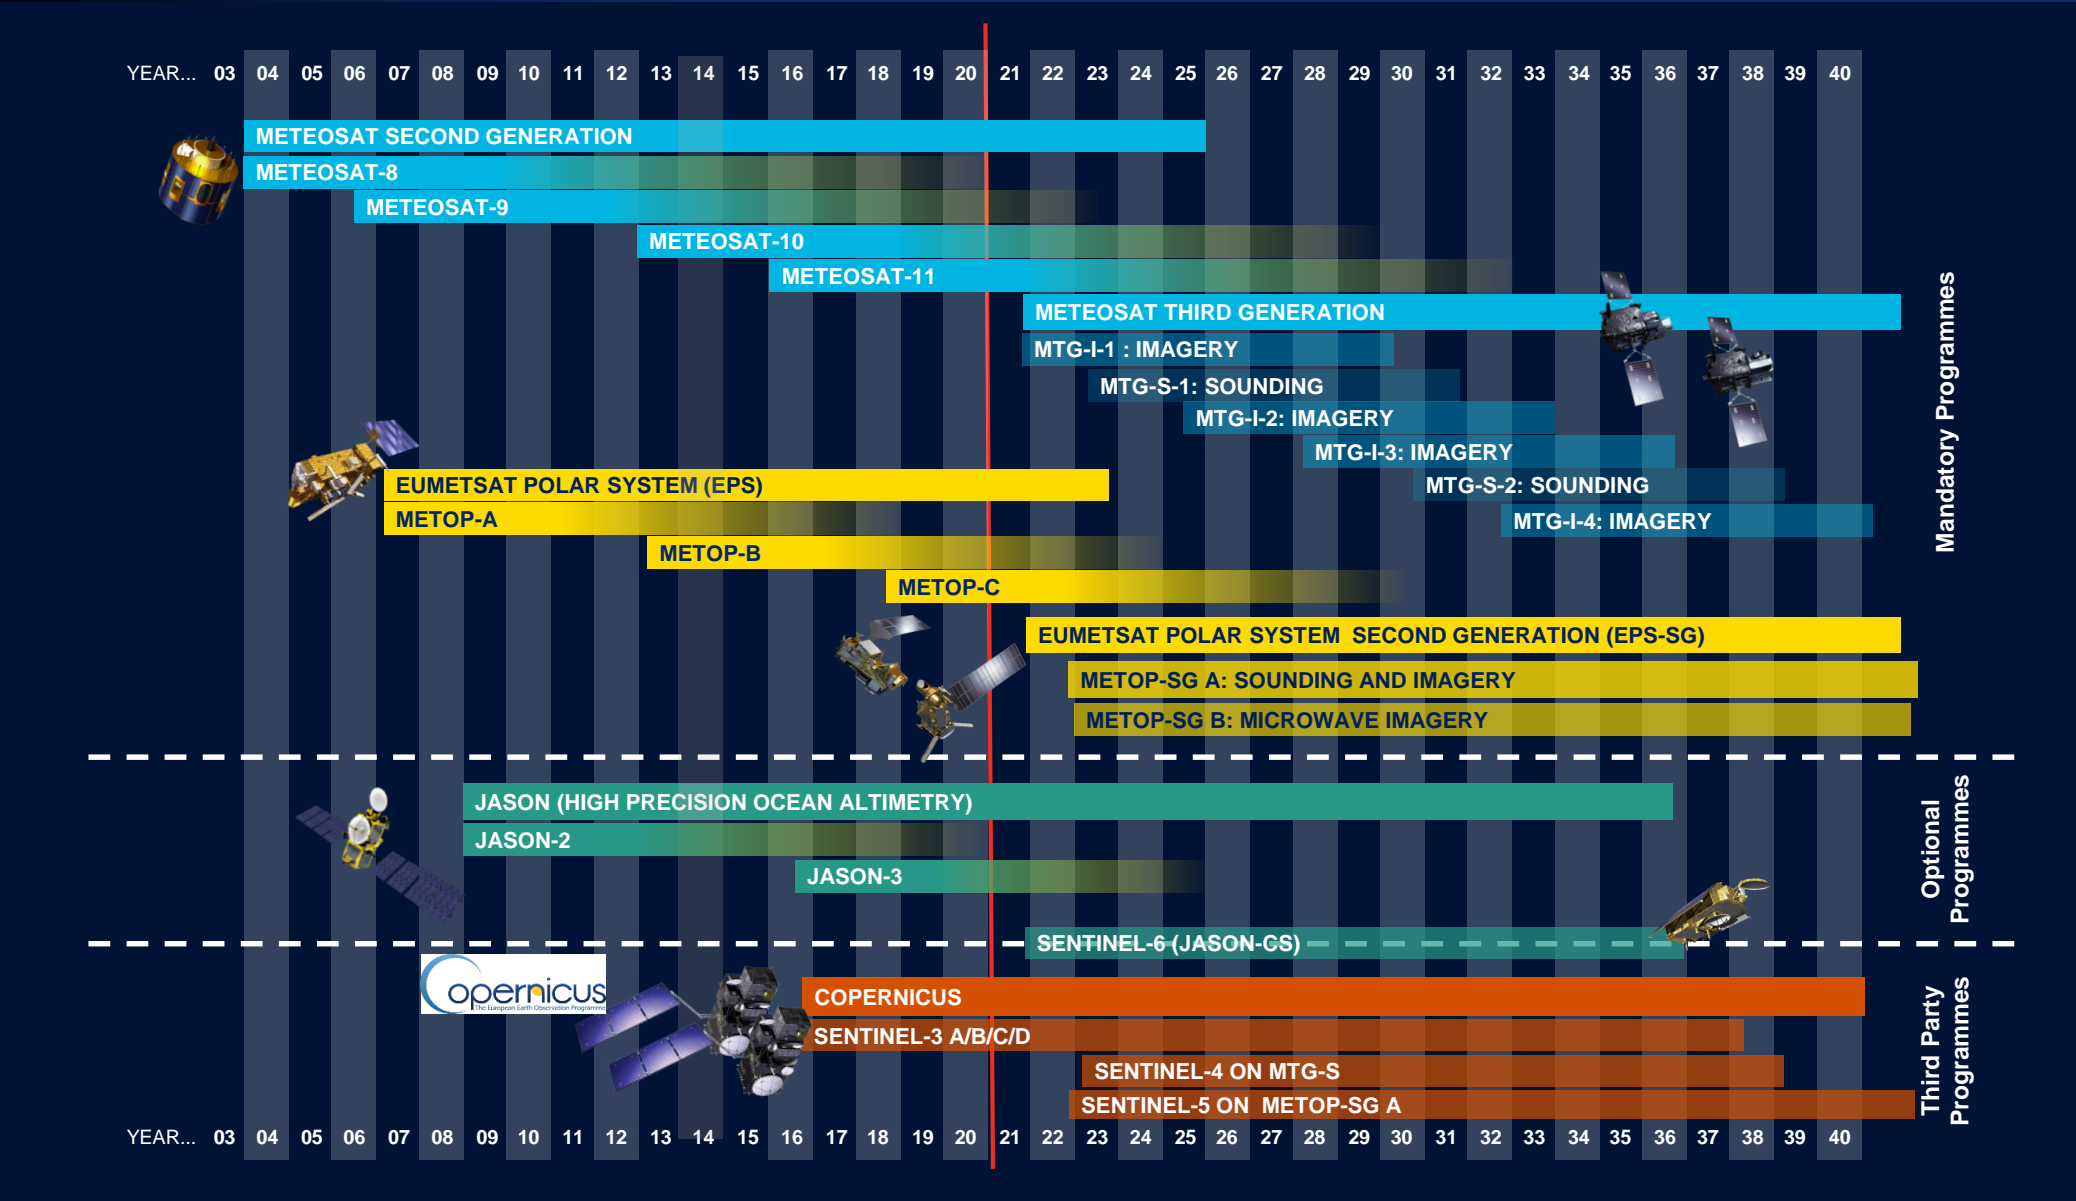

➔ Geostationary satellites that have been operated since the 70th

➔ EUMETSAT and the SAFs generate time series of Climate Data Records from these

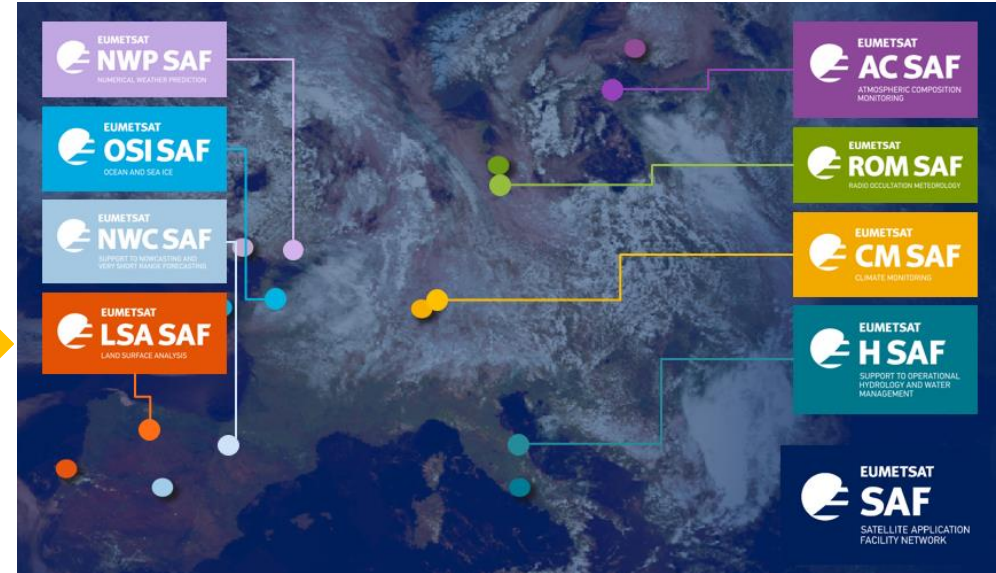

Courtesy Kenn Knapp

EUMETSAT committed to more & better observations until 2040

Satellite Application Facilities

- EUMETSAT has a network of different Satellite Application Facilities (SAFs)
- SAFs are dedicated centres of excellence for processing satellite data
 - research, development and operational activities
 - each SAF focusses on specific user communities or application areas

- Each SAF is a consortium of entities from EUMETSAT member states
