

The session will start at 12 UTC

CLAAS – A Climate Data Record of Cloud Properties

If you have **technical issues**, please send a message in the **zoom chat box to Support**.

For **Q&A**: go to Slido.com – event code: **#EUMSC36**

For **technical issues**: Use the **zoom chat**

For **Q&A**: go to **Slido.com** – event code: **#EUMSC36**

All **material** will be shared after the course on course page:

<https://training.eumetsat.int/course/view.php?id=473>

Welcome and Introduction

(Christine Träger-Chatterjee, EUMETSAT)

The new CLAAS data record

(*Jan Fokke Meirink, CM SAF/KNMI*)

Q&A

Ordering Data from CM SAF

(Steffen Kothe, CM SAF/DWD)

Q&A

Using the data – CM SAF R Toolbox

(Steffen Kothe, CM SAF/DWD)

Q&A

Using the data – Jupyter Notebooks

(Irina Solodovnik, CM SAF/DWD; Antonio Vecoli, EUMETSAT/MEE0)

Q&A

Wrap up and closing (14:00 UTC)

EUMETSAT is an intergovernmental Organization

www.eumetsat.int

Tasks

- Develop, maintain, exploit European systems of meteorological satellites, taking into account as far as possible the recommendations of WMO.
- Contribute to operational climate monitoring and the detection of global climatic changes.

Current EUMETSAT satellites

www.eumetsat.int

SENTINEL-3A & -3B (98.7° incl.)

Low Earth, sun-synchronous orbit

Copernicus satellites delivering marine data services from 814km altitude

JASON-3 (63° incl.)

Low Earth, non-synchronous orbit

Copernicus ocean surface topography mission (shared with CNES, NOAA, NASA and Copernicus)

Sentinel-6 Michael Freilich (66° incl.)

Low Earth, non-synchronous orbit

Copernicus ocean surface topography mission (shared with NASA, NOAA, ESA and Copernicus with support from CNES)

METEOSAT-10, -11

Geostationary orbit

Meteosat Second Generation

Two-satellite system

Full disc imagery mission (15 mins)
(Meteosat-11 (0°))

Rapid scan service over Europe (5 mins)
(Meteosat-10 (9.5° E))

METEOSAT-9 (45.5° E)

Geostationary orbit

Meteosat Second Generation
providing Indian Ocean
data coverage

METOP-B & -C (98.7° incl.)

Low Earth, sun-synchronous orbit

EUMETSAT Polar System (EPS)/
Initial Joint Polar System

MTG-I1

Geostationary orbit

Meteosat Third Generation imaging mission,
currently in commissioning phase

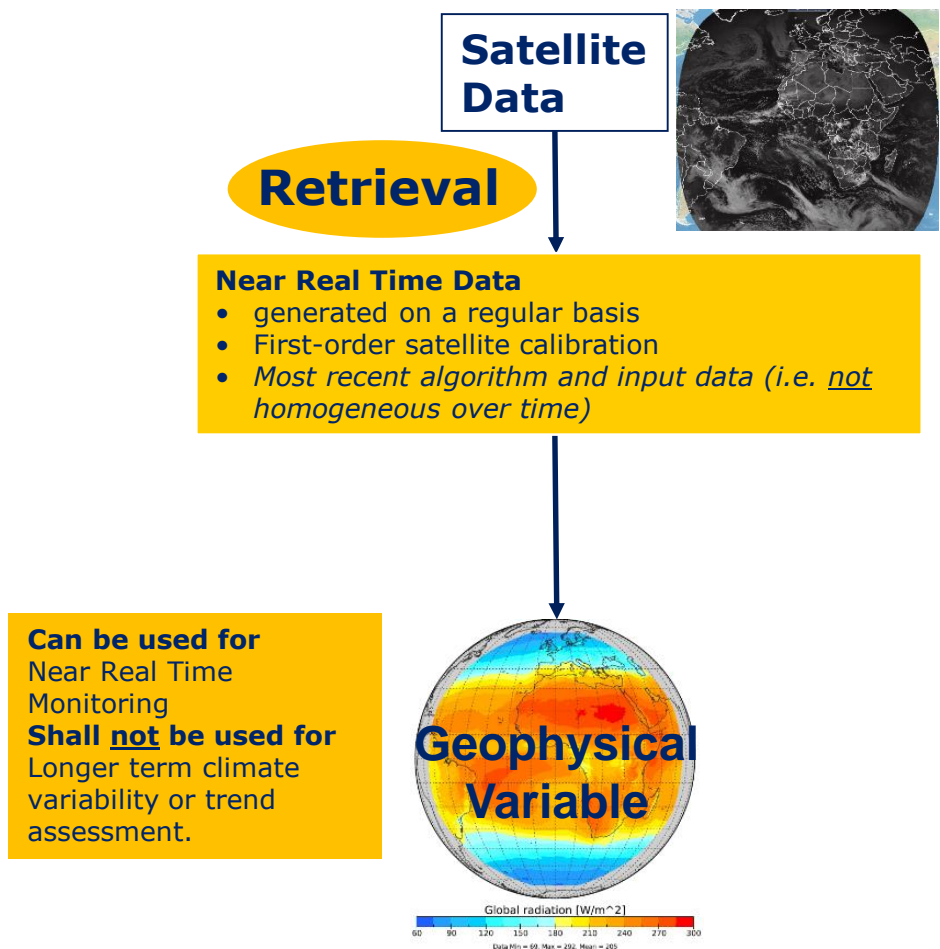

- EUMETSAT has a network of different Satellite Application Facilities (SAFs)
- SAFs are dedicated centres of excellence for processing satellite data
 - research, development and operational activities
 - each SAF focusses on specific user communities or application areas

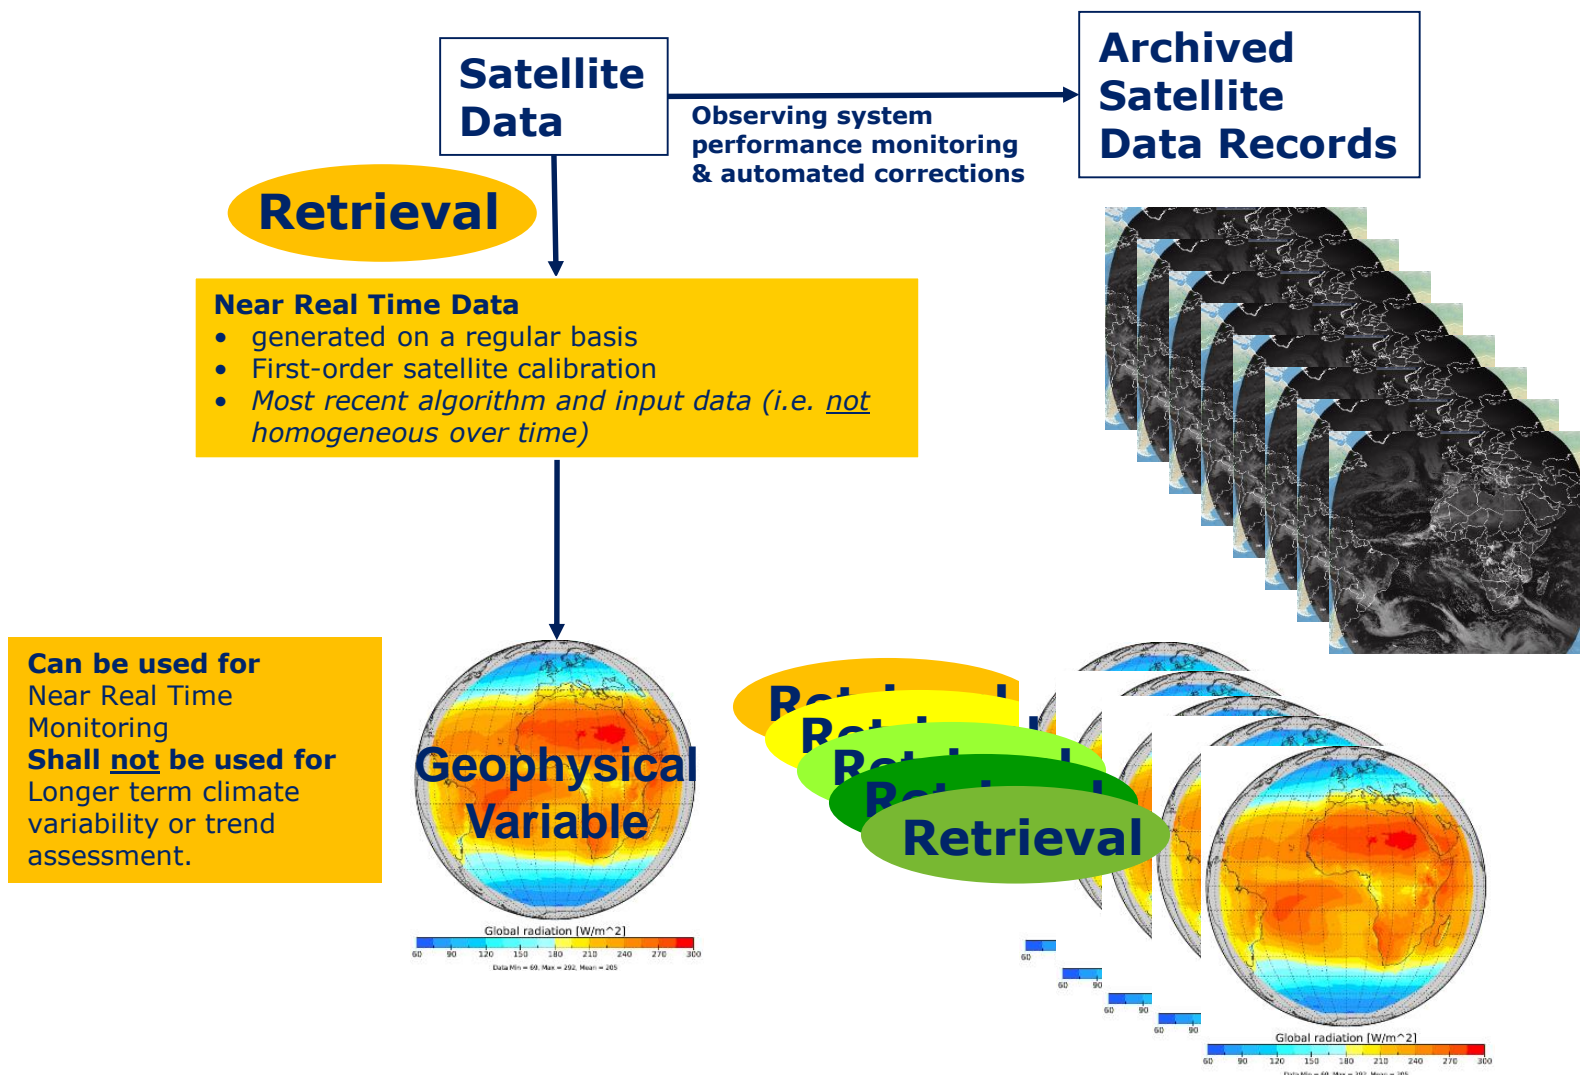

- Each SAF is a consortium of entities from EUMETSAT member states

Short and Intermediate Term

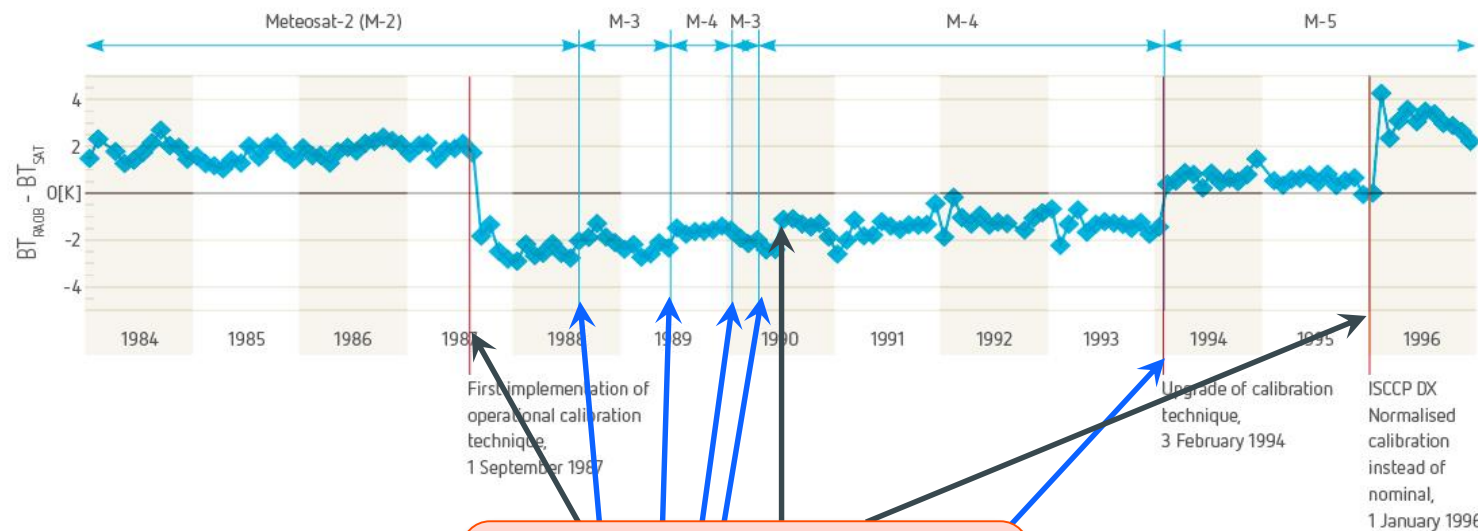

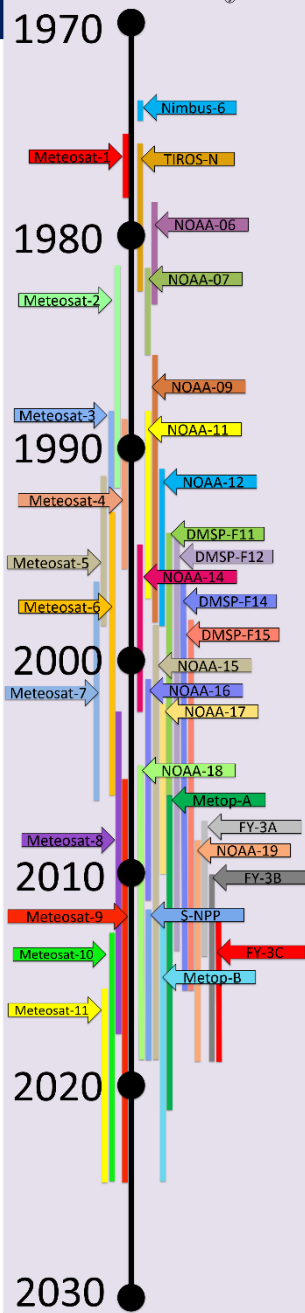

Longterm

Space based Climate Monitoring - Challenges

www.eumetsat.int

Calibration changes

Instrument changes

Short and Intermediate Term

Satellite Data

Observing system performance monitoring & automated corrections

Retrieval

Near Real Time Data

- generated on a regular basis
- First-order satellite calibration
- *Most recent algorithm and input data (i.e. not homogeneous over time)*

Can be used for Near Real Time Monitoring
Shall not be used for Longer term climate variability or trend assessment.

Archived Satellite Data Records

Re-calibration & Inter-calibration

Longterm

Fundamental Climate Data Records

Retrieval

Reprocessing

Climate Data Record

- Generated on an irregular basis, i.e. every few years
- Calibrated and homogenized satellite data
- Algorithm and auxiliary input data homogeneous over time
- Resulting time series fully applicable for climate monitoring purposes, including trend estimation

Suited for longer term climate variability & climate change analysis as other applications.

Short and Intermediate Term

Satellite Data

Observing system performance monitoring & automated corrections

Retrieval

Near Real Time Data

- generated on a regular basis
- First-order satellite calibration
- *Most recent algorithm and input data (i.e. not homogeneous over time)*

Geophysical Variable

Global radiation [W/m²]

Data Min = 69, Max = 292, Mean = 205

Can be used for Near Real Time Monitoring
Shall not be used for Longer term climate variability or trend assessment.

Archived Satellite Data Records

Re-calibration & Inter-calibration

Longterm

Fundamental Climate Data Records

Retrieval

Reprocessing

Climate Data Record

- Generated on an irregular basis, i.e. every few years
- Calibrated and homogenized satellite data
- Algorithm and auxiliary input data homogeneous over time
- Resulting time series fully applicable for climate monitoring purposes, including trend estimation

Geophysical Variable

Global radiation [W/m²]

Data Min = 69, Max = 292, Mean = 205

Suited for longer term climate variability & climate change analysis as other applications.

Retrieval

Interim Climate Data Record

- Generated on a regular basis
- First-order satellite calibration
- Same algorithm and auxiliary input data as for current TCDR
- Fill the gap between end of CDR and present.

Geophysical Variable

Global radiation [W/m²]

Data Min = 69, Max = 292, Mean = 205
